Provide mappings between service provider attributes to available user profile fields.

email	Basic Information	Primary Email
given_name	Basic Information	First Name
family_name	Basic Information	Last Name

07

Click **FINISH**

Definitions:

Domain user - a domain user is a user with a username/email that is managed through your company domain. eg. if you company "Example" uses the email domain "example.com", then "jane.doe@example.com" would be a domain user.

Things to know:

New domain users must be assigned to the Logikcull app in OKTA and added to your Logikcull account in the Logikcull (<https://app.logikcull.com>)

All domain users will be required to login through SSO and therefore must be authorized Logikcull users in your IdP.

If you invite users to your Logikcull account that are not domain users, such as external counsel, they will log into Logikcull directly using a username and password.

If you have enforced 2FA on your Logikcull account, which is recommended, all users will be required to enter a second factor regardless of login method.
