## Infinite Branding Updates

Effective October 1, 2021, Infinite Computer Solutions ("Infinite"), acquired the IBM Talent Management Solutions business. The new Infinite Talent Acquisition Suite includes Infinite BrassRing, Infinite Lead Manager, Infinite Onboard, and the Infinite BrassRing Platform.

Based on this change, users may find updated branding, logo, and title changes across the products on various pages including documentation and training modules. These changes include updates or changes to the product privacy policies, and copyright information.

Please reach out to your Infinite representative with any questions regarding these changes.

## BrassRing November Release

BrassRing new features for the release 21.11.15 are listed here.

### Client Reminders

The Client Reminders section reminds clients of recently distributed important notices and links to comprehensive documentation and training for the special features recently introduced.

### Enhancements - You Asked We Listened

We are proud to inform that this build introduces features that were developed in response to clients' Requests for Enhancement (RFEs). Infinite is pleased to deliver these features in response to your responses and comments.

### Requests for Enhancement (RFEs)

The following features were delivered in response to RFEs.

- Ability to add custom text to the Account Creation Page

### Dark Launch Features

Dark Launch features are those features that are released to the Staging environment only and are NOT released to the Production environment for a considerable amount of time. This process gives an opportunity and enough time to test these features thoroughly before they are available in the production environment. Clients are requested to configure and test these features and provide their feedback and inputs to your respective Infinite representatives.

### Reqs - Req Edit Audit Trail

#### NOTE

This feature is deployed to the **Staging environment - Only** with the current release. This feature will NOT be released to Production on 22 November 2021. The production date is yet to be determined. See the upcoming release notes for status updates on this feature.

Starting this release, BrassRing users can review the modifications made to a req in the req's audit trail. The audit trail is going to be available for the edits made to reqs after this release.

The audit trail is available in the History tab of the req. A new link **View field change details** is displayed next to the Req modification history. Users select this link to open a new module that displays a table of comparison between existing information of the req and the old information.

A new user type privilege **View Field Audit History** is added in the Workbench User Types > Reqs2. The req history audit is available to the user types that have this new user type privilege enabled.

RTC Internal reference # 302016.

## Visible Changes

### Talent Gateways - Show Related Jobs

Starting this release, the job details on the job details page display an additional button.

**Show Related Jobs** is displayed in the Job details. When candidates select this button, a search is performed to find jobs with matching skills such as the original job on which they have selected this button. Jobs have skills under two different criteria. Preferred skills and Required skills are added for each job. When a search is performed, the skills of the original job are matched with both required skills and preferred skills.

If the search finds one or more jobs with similar skills, those jobs are displayed. If no other jobs are available with skill requirements matching that of the original job, then a message is displayed saying no other jobs are found.

For this feature to search and display jobs, the following prerequisites must be met:

1. The client setting **Enable Skills field on Requisitions** must be set to Yes.
2. Clients must update the following new default custom req fields to be searchable.  
[STD\_Rqd\_Skills] "Required Skills"  
[STD\_Rcmd\_Skills] "Recommended Skills")
3. The req fields must be added to the required req template, and be populated with skills of the req before the req is posted to a Talent Gateway.

This new button is available on the Job details page only.

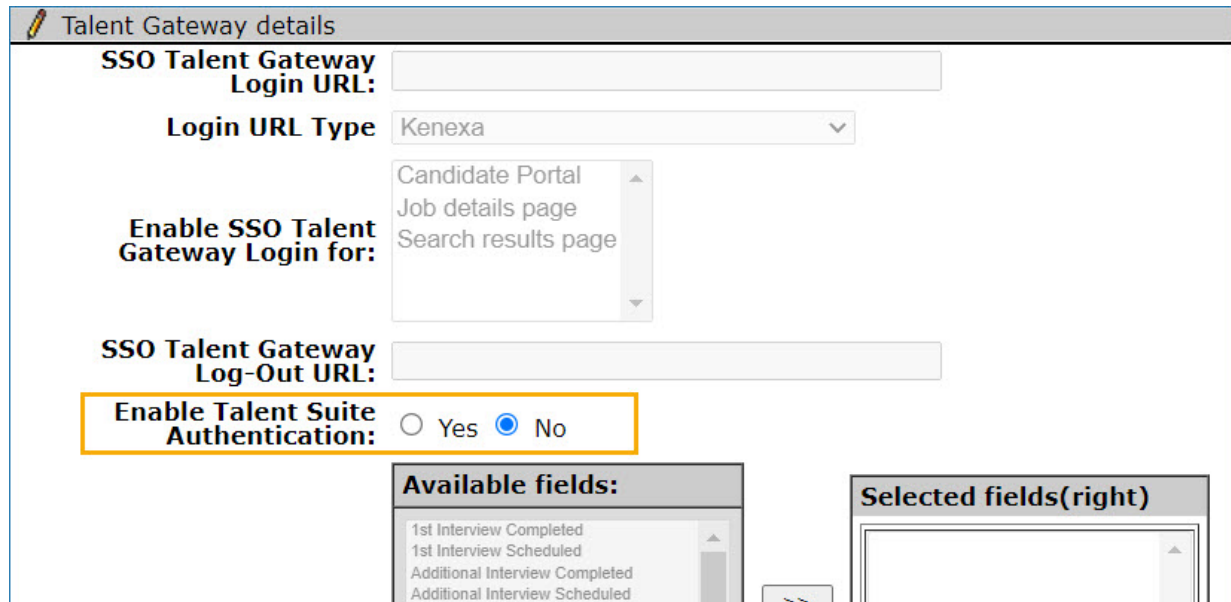

RTC Internal reference # 301974.

## Talent Gateway Details - Setting Update

When Workbench users use the Save As New option on Talent Gateways, the setting **Enable Talent Suite Authentication** is configured to Yes and the setting is greyed-out. This prohibits clients from making changes to the setting.

Based on client request, this setting is enabled and made configurable by the Workbench users so that they can update the setting as per clients' requirements.

Talent Gateway details

Enable Talent Suite Authentication:  Yes  No

Available fields: 1st Interview Completed, 1st Interview Scheduled, Additional Interview Completed, Additional Interview Scheduled

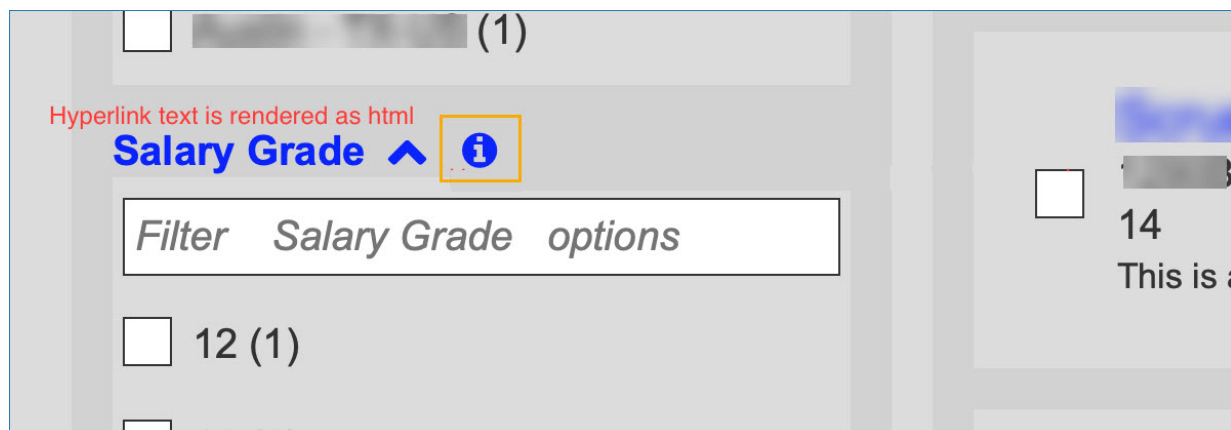

Selected fields(right):

RTC Internal reference # 303633.

## Talent Gateways - Req Fields with HTML Labels

It was reported that when a req field is configured with HTML label, the label is not rendered correctly. In addition, it was also reported that the label does not redirect correctly if it is present in a facet.

To resolve this issue, the hyperlink configuration is updated to display an information icon if hyperlink redirection is configured to the field label. Starting this release, if a field label present in the facet is configured with a hyperlink redirection, the label itself will allow the field to expand and collapse, and the information icon works as the redirection link.

Hyperlink text is rendered as html

Filter Salary Grade options

12 (1)

RTC Internal reference # 303802.

## **BrassRing Menu - Menu Option Removal**

The menu option **BrassRing Support Community** is removed from the BrassRing Home page's hamburger menu.

RTC Internal reference # 304597.

## **Configurable Changes**

### **Talent Gateways - Add Custom Text to Login Page**

Based on requests from multiple clients, a provision to add customized Talent Gateway account creation instructions is added to the login page of the Talent Gateways.

A new Workbench setting is added in the Talent Gateways Responsive Layout section. Clients can provide customized text in the text area provided. The new setting **Create Account text** is added in the General section of the Responsive Layout section.

The text entered in this setting is displayed in the Create Account section of the Talent Gateway.

RTC Internal reference # 303041.

# Onboard November 2021 Release

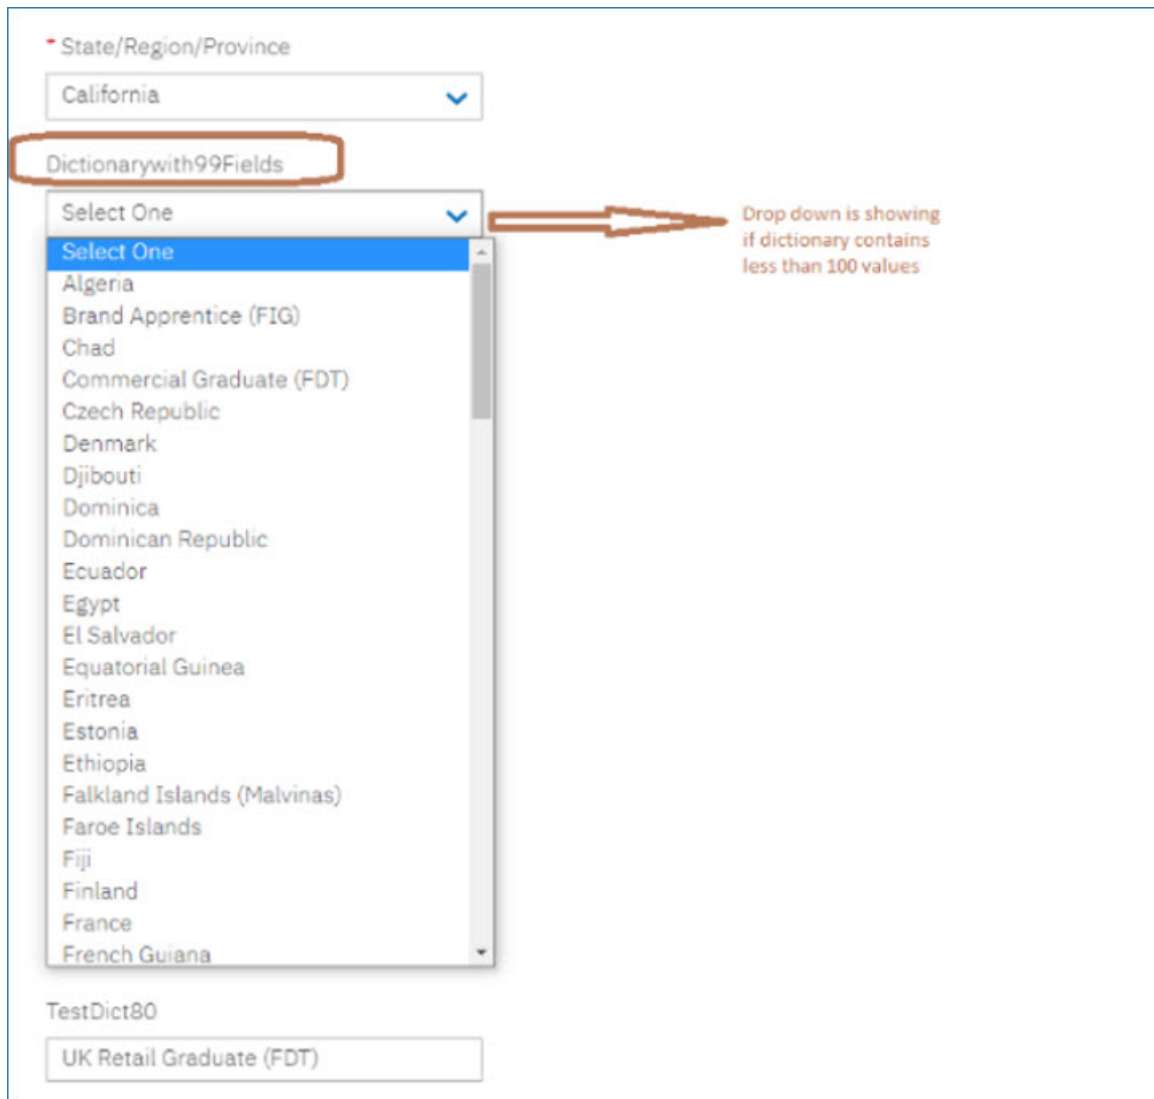

Onboard new features for the November release are listed here.

## Visible Changes

### Personal Information Screen - Update Field Type

It was observed that for some clients, there are drop-down fields for which the data dictionary spans up to 4000 values. This means, when a user selects the drop-down, the system tries to populate all of these values into the drop-down. This creates a resource crunch and as a result, users experience page freeze or session time-outs.

To improve customer experience, starting this release, in the Personal Information screens, the dictionary field type is updated from drop-down to Suggestion box if the field has more than 100 values. This ensures that there would not be a session timeout. Users enter the first three alphabets and based on that entry, values are suggested. Users select an appropriate value from the suggestions.
