BrassRing ATS June'22 Release

BrassRing ATS new features for release 22.06.07 are listed here.

BrassRing ATS Client Reminders

The Client Reminders section reminds clients of recently distributed important notices and links to comprehensive documentation and training for the special features recently introduced.

Talent Gateways - User Experience Guidelines

Talent Gateways are optimized for an excellent candidate experience, per years of guidance and inputs from user experience designers. Clients who have customized their Talent Gateways in the Visual Branding Tool should be mindful of the following:

- **Custom colors** can result in low-contrast text or link content, a problem for colorblind candidates. Custom Talent Gateway colors should be reviewed and adjusted, if needed, to ensure adequate contrast per the WCAG guidelines. There are numerous contrast checker tools available online; for example, <https://webaim.org/resources/contrastchecker/>.
- **Custom CSS** which hides lines or elements of the Talent Gateway can result in contrast/accessibility issues or hidden/ blocked functionality, which can deteriorate the candidate experience. Any Talent Gateway with custom CSS should be fully reviewed by the client for accessibility compliance, as well as ensuring that no functionality is hidden/blocked unintentionally.
 - In addition, Signal Labs Talent is committed to continuous improvement and releases UI as well as functionality features regularly. Clients with CSS should be verifying their Talent Gateway User Interface for **each new release** in Staging during the one-week window before the release to Production, to avoid any disruption to the candidate experience (in Production). In case an issue is discovered, where possible, clients should update their CSS in Staging and Production (where not possible, they should report via Salesforce).

Clients are reminded of the HR Status Mapping required to have been completed in order for the candidates to see important submitted application detail, including filter by status and the application details page (status progress bar, application record, posted interviews, documents, or forms). As of 2022, there are 10+ clients that have not yet completed this. Refer to the View or Edit HR Status Categories section on this [Knowledge Center page](#).

Browser Support Update

Microsoft is dropping support for IE 11 browser on Windows 10, as of June 15, 2022. Following that date, we do not accept defects specific to IE 11. All BrassRing ATS Talent users who are currently using the IE11 browser are advised to switch to the Microsoft Edge browser before June 15, 2022.

Refer to the [Browser Support section](#) of the Knowledge Center for more information.

BrassRing ATS Dark Launch Features

Dark Launch features are those features that are released to the Staging environment only and are NOT released to the Production environment for a considerable amount of time.

This process gives an opportunity and enough time to test these features thoroughly before they are available in the production environment. Clients are requested to configure and test these features and provide their feedback and inputs to your respective Signal Labs representatives.

Talent Gateways - User Interface Enhancements - Splash Screen

NOTE

This feature is deployed to the ***Staging environment - Only*** with the current release. This feature will NOT be released to Production on 14 Jun 2022. The production date is yet to be determined. See the upcoming release notes for status updates on this feature.

Splash screens are an interesting and fun way to launch an application or a web page. They engage the users (candidates of the Talent Gateway) for a brief period. They are displayed for a short moment while all the visual elements are loaded into the browser window.

Starting this release, a splash screen is displayed when a BrassRing ATS Talent Gateway is launched. The Background color is from Header Background Color, with animated text using the Talent Gateway main background color (from the Visual Branding Tool). The Splash screen scroll blends into the header after the content load is complete.

Currently, the splash screen is set for a fixed latency of 1 second. In a future release, configuration settings for the time delay (latency) of the splash screen are provided.

RTC internal reference # 306934.

BrassRing ATS Visible Changes

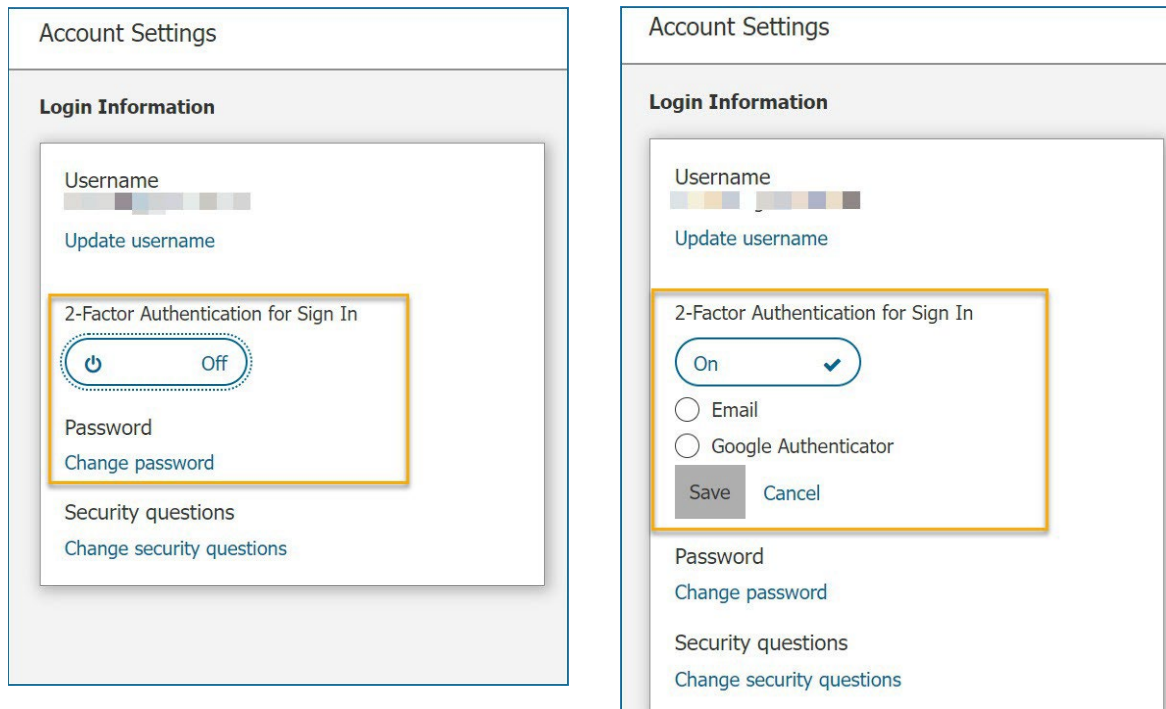

BrassRing ATS visible changes for the current release are listed here.

Talent Gateways - Two Factor Authentication - Accessibility Updates Account Settings - Keyboard Navigation

The following keyboard navigation issues were reported in the recently added feature of 2 Factor Authentication in the Talent Gateways.

- The radio button is difficult to use for Google Authenticator selection, the down arrow key pops the Email modal, so candidates cannot select the Google Authenticator using keyboard navigation.
- Google Authenticator modal has X close button in focus but requires two tabs to exit/close button.
- The QR Code and Secret Key sections lose focus when candidates select the "show less" link.

In order to resolve the reported issues, a new toggle button is added. Candidates can toggle between On and Off options using this switch.

The new toggle switch helps candidates On and Off the 2-factor authentication feature.

Account Settings - Screen Reader

The following screen reader issues were reported in the Two Factor Authentication feature in the Talent Gateways.

- Passcode validation - screen reader does not announce when incorrect passcode is entered.
- There is no announcement upon a successful passcode validation.
- Passcode validation instructions are announced after the modal is closed.
- The continue button label is announced, but the focus is not on the button.

The reported issues are addressed in the current release. Candidates can hear appropriate announcements by the screen reader based on the events and actions.

RTC internal reference # 307351, 305267, 307574.

Talent Gateways - User Experience Enhancements

The following candidate experience enhancements are available in the Talent Gateways from the current release.

- A new icon is prefixed to the job title in the job search results when the job can be referred. The job referral icon helps candidates easily identify that they can refer this job to someone. Previously, the star icon is used for this purpose. However, the new icon is more intuitive and easy to understand that it is a referral job.
- The following are the pages on which the new referral icon is displayed when the job is eligible for referral:
 - Landing page: prefixed to the hyperlinked job title for each job card or row (in featured jobs)
 - Search Results: prefixed to the hyperlinked job title for each job card/row (in search results)
 - Job Details - main content: prefixed to the job title or header
 - Job Details - Previous or Next Job summary cards: prefixed to the hyperlinked job title
 - Job Details - Show Related jobs modal: prefixed to the hyperlinked job title for each job card or row

BrassRing ATS, BrassRing Lead Manager and BrassRing Onboard

- Saved Jobs: prefixed to the hyperlinked job title for each job card or row
- Card Footers - The footers and the actions on the job cards in various pages like Saved Jobs, Saved Searches, profiles, etc., are displayed more prominently now to ensure that users can identify an actions present on the footer of the card.
- The following cards have been enhanced with this change in the Candidate Zone:
 - Dashboard: Saved jobs, Submitted Applications, Saved Applications, Saved Searches, and Job Alerts
 - Profile: education, experience, résumé/CV, cover letter, other documents
 - Referrals: Sent referrals, Active referrals
 - Message Archive: message cards
 - Assessments
- The following cards have been enhanced with this change in the Notification drop-down:
 - All notification and message cards (including saved draft expiry reminders, 2-factor notifications, and candidate communications).
- A new link is added to clear the search filter selections on the filters panel. The link **Clear** is displayed only when at least one filter is selected. Selecting the link clears all filters.

The screenshot shows the BrassRing ATS interface. At the top, there are links for "Job search", "Candidate Zone" (with a dropdown arrow), and "Sign Out". Below these is a "Back" button with a circular arrow icon.

The left sidebar is divided into two sections. The top section is for searching job opportunities, with a text input field for "Search job opportunities that match your interests" (placeholder: "title, job category, keywords"), a "Search location" input field (placeholder: "location"), a green "Search" button, and a link for "Advanced Search". The bottom section is titled "Narrow selections" and contains two filter groups: "Department" with a checkbox for "Sample Department 2 (1)" and "Location/Division" with a checkbox for "Sample Location 1 (2)".

The main content area is titled "3 results" and displays three job cards. Each card has a checkbox on the left, a person icon, a job title, and a brief description. The first and third cards are for "Solutions Expert" and the second is for "Consultant Info Dev". The job titles and descriptions are highlighted with yellow boxes in the original image.

BrassRing ATS Configurable Changes

The BrassRing ATS configurable changes for the current release are listed here.

Integration - Req Import - JCDD JCPD Nodes

NOTE

This feature was released in the Staging environment during the May release. This feature is going to be available in the production environment during the current release.

Starting this release new nodes are added for JCDD and JCPD in the Requisition import integrations.

BrassRing ATS, BrassRing Lead Manager and BrassRing Onboard

```
<APPLYJCDD excludeSTDFields="" excludeCUSTFields="" applyPostingDe-  
faults="[yes/no/1/0]">[yes/no/1/0]</APPLYJCDD>
```

- **excludeSTDFields** - This attribute can hold comma-separated standard field XML tags (actually DataInField of JobReqQuestions) which would be excluded while applying JCDD. This node can be empty otherwise.
- **excludeCUSTFields** - This attribute can hold comma-separated DataInField of the custom questions which would be excluded while applying JCDD. This node can be empty otherwise.
- **applyPostingDefaults** - Possible values would be yes/no/1/0.
- **APPLYJCDD** - Possible values would be yes/no/1/0.

For example:

```
<TransactInfo transactType="response"> <TransactId>november26916am</Transac-  
tId> <TimeStamp>2017-04-25 08:00 AM</TimeStamp> <Status> <Code>206</Code>  
<ShortDescription>Partial Success</ShortDescription> <LongDescription>Error  
while applying PostingDefaults</LongDescription> </Status></TransactInfo>
```

RTC internal reference #306760.

BrassRing ATS Workbench Changes

The Workbench changes for the current release are listed here.

Create Trigger - Automation Trigger Options Optimization

As a part of the product enhancements, the number of Automation trigger creation options are reduced. The Add Automation Trigger screen now displays only the following two trigger types that are available for creation:

- Evergreen Req - Candidate Archive
- RAM Trigger

Before this release:

BrassRing ATS, BrassRing Lead Manager and BrassRing Onboard

Add Automation Trigger

Trigger Type

*Trigger name:

☐ Assessments

☐ Candidate HR Status - send Talent Record

☐ Candidate HR Status Aging

☐ Evergreen Req – Candidate Archive

☐ Gateway Posting Expire

☐ HR Status update - notify candidate

☐ RAM Trigger

☐ Req Aging

☐ Talent Record Viewed - update HR Status

☐ Update HR Status Across all Reqs for Candidate in Final HR Status

*Select trigger type:

Trigger Description ?

Save and continue

Cancel

After this release:

Add Automation Trigger

Trigger Type

*Trigger name:

☐ Evergreen Req – Candidate Archive

☐ RAM Trigger

*Select trigger type:

Trigger Description ?

Save and continue

Cancel

Job Code Default Data - Req Import - Workbench Changes

NOTE

This feature was deployed to the **Staging environment - Only** with the previous release. This feature is released to Production with the current release.

Partial success is a new status that is introduced in this current release in the Staging environment. In order to retrieve the logs and client statuses for this new status, a new drop-down item is added in the Workbench in the **Retrieve client posts** section.

BrassRing Lead Manager Jun'22 Release

The following is the list of features and fixes during this release for BrassRing Lead Manager.

Bulk Upload - Lead Skills Field Re-positioned

Starting this release, the new LeadSkills field is available on the Contact Information section of Add Lead screen. Therefore, in the Bulk Import Excel template, this field is added after the Source field and before DesiredAnnualCompensation field.

The instructions about the Lead Skills field are updated as follows:

Field Name: LeadSkills

Field Type: Text

Instructions: Enter Skills possessed. Can enter multiple values. Each value needs to be delimited by a || (double-pipeline symbol)

RTC internal reference # 307723.

BrassRing Onboard Jun'22 Release

BrassRing Onboard new features for the June release are listed here.

BrassRing Onboard Visible Changes

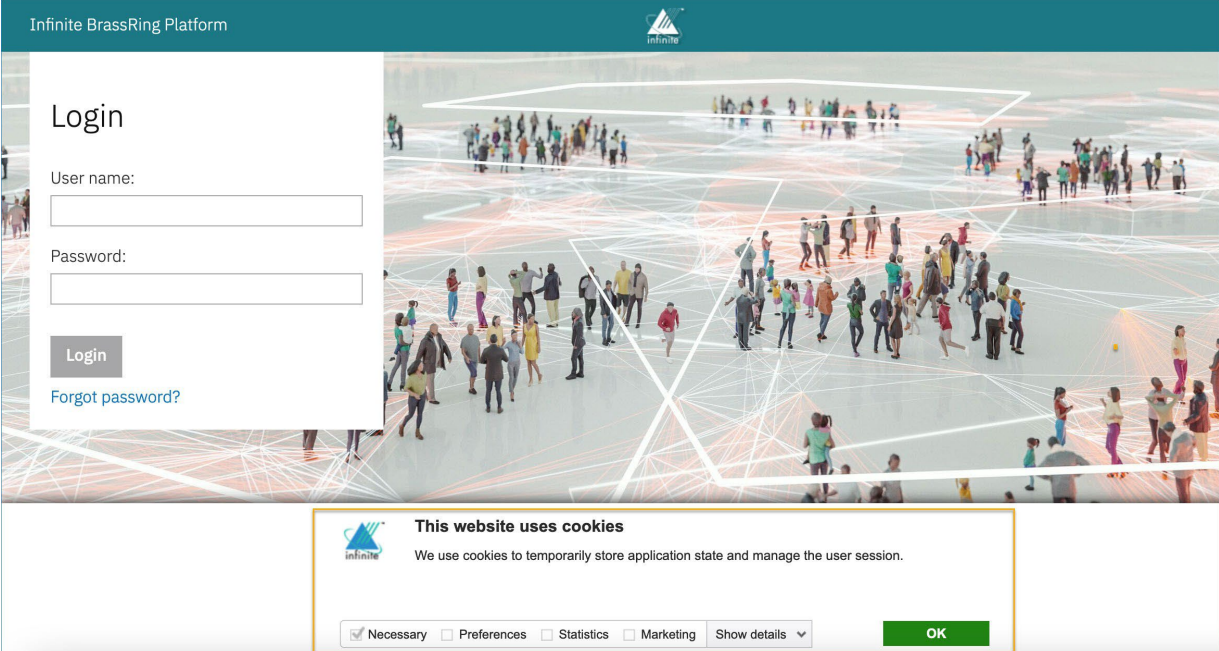

BrassRing Onboard new features for the current release are listed here.

Login Page - Cookie Preference Selection

Starting this release, a new cookie preference message is displayed when a user launches the Talent BrassRing ATS Platform Login page. The following message is displayed:

This website uses cookies: We use cookies to temporarily store the application state and manage the user session.

The new message is displayed as a pop-up at the end of the login page when the user launches this page for the first time. The user's cookie preferences are recorded.

The screenshot shows the login page of the Infinite BrassRing Platform. The page has a teal header with the text "Infinite BrassRing Platform" and the Infinite logo. The main content area features a large background image of a crowd of people connected by a network of white and red lines. On the left, there is a white login box with the title "Login", fields for "User name:" and "Password:", a "Login" button, and a link for "Forgot password?". At the bottom of the page, a yellow-bordered pop-up message is displayed. The message contains the Infinite logo, the text "This website uses cookies", and a sub-message "We use cookies to temporarily store application state and manage the user session." Below this, there are four checkboxes: "Necessary" (checked), "Preferences", "Statistics", and "Marketing". To the right of these checkboxes is a "Show details" link with a dropdown arrow. A green "OK" button is located at the bottom right of the pop-up.

RTC internal reference # 304636.

BrassRing Onboard Configuration Changes

There are no BrassRing Onboard configurable features for the current release.

BrassRing Onboard Fixed Defects

There are no fixed defects in the current release.
