Terms and conditions for product documentation

Permissions for the use of these publications are granted subject to the following terms and conditions.

Applicability

These terms and conditions are in addition to any terms of use for the IBM® website.

Personal use

You may reproduce these publications for your personal, noncommercial use provided that all proprietary notices are preserved. You may not distribute, display or make derivative work of these publications, or any portion thereof, without the express consent of IBM.

Commercial use

You may reproduce, distribute and display these publications solely within your enterprise provided that all proprietary notices are preserved. You may not make derivative works of these publications, or reproduce, distribute or display these publications or any portion thereof outside your enterprise, without the express consent of IBM.

Rights

Except as expressly granted in this permission, no other permissions, licenses or rights are granted, either express or implied, to the publications or any information, data, software or other intellectual property contained therein.

IBM reserves the right to withdraw the permissions granted herein whenever, in its discretion, the use of the publications is detrimental to its interest or, as determined by IBM, the above instructions are not being properly followed.

You may not download, export or re-export this information except in full compliance with all applicable laws and regulations, including all United States export laws and regulations.

IBM MAKES NO GUARANTEE ABOUT THE CONTENT OF THESE PUBLICATIONS. THE PUBLICATIONS ARE PROVIDED "AS-IS" AND WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO IMPLIED WARRANTIES OF MERCHANTABILITY, NON-INFRINGEMENT, AND FITNESS FOR A PARTICULAR PURPOSE.

Chapter 1. Release Notes for Release 19.04.08

Introduction.

The objectives of this document are to:

- Present feature enhancements and usability and performance improvements that are introduced in this release.
- Document changes in system requirements, if applicable.

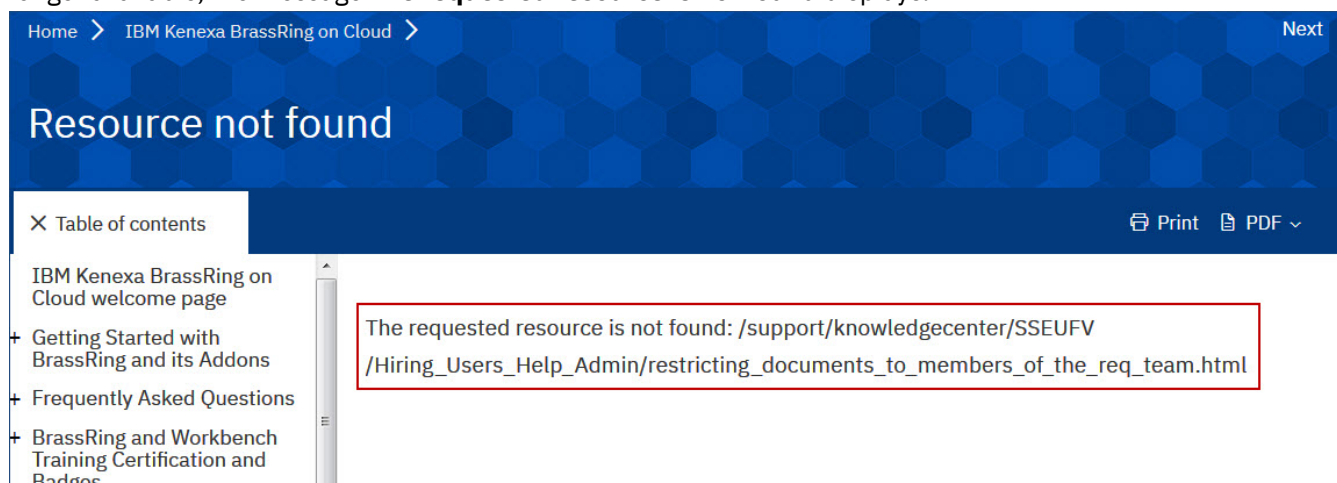

To download the PDF version of this document and the preceding versions, go to [Download-able PDF Release Notes](#)

Client Reminders

The **Client Reminders** section reminds clients of recently distributed important notices and links to comprehensive documentation and training for the special features recently introduced.

IBM Knowledge Center - Broken Links

In October 2018 the BrassRing on Cloud documentation was rewritten with a new approach and structure. This rewrite resulted in the existing content being moved to different URLs. If a URL is no longer available, the message **The requested resource is not found** displays.

This message does not mean that the content is not available, just that it might be available at a different location in the documentation. It is recommended that you use the **Search** function or the Table of Contents to find the content that you need and update any existing bookmarks to the new content that is available.

Ending Support for Classic Talent Gateways

Competition for top candidates is fierce and **research has shown that employees designated as high-potentials are especially attracted to searching and applying for jobs using mobile devices**. Our customers that moved to responsive Talent Gateways are seeing a vast improvement in candidate completion rates.

Ending Support for Classic Talent Gateways

Competition for top candidates is fierce and **research has shown that employees designated as high-potentials are especially attracted to searching and applying for jobs using mobile devices**. Our customers that moved to responsive Talent Gateways are seeing a vast improvement in candidate completion rates.

Upgrading your Classic Full & Global Talent Gateways to the Responsive, mobile-friendly experience is not only beneficial for you, it is **required** as IBM focuses on responsive design and providing a great user experience in all areas of BrassRing feature development.

Support has been discontinued for:

- Classic Full & Global Talent Gateways - as of Dec, 2017.
 - Includes: Classic Search and Classic Candidate Zone.
- Classic Job Apply (including classic Non-Gateway Questionnaire and classic Gateway Questionnaire job postings) – as of Dec, 2017.
 - Clients can no longer create (or save as new) classic Gateway Questionnaires – as of Feb, 2019.
 - Recruiters and Hiring Managers can no longer post jobs without Gateway Questionnaires – as of Feb, 2019.
- Classic Candidate Portal – as of Dec, 2018.
- Classic Full Talent Gateway Attachments – as of Feb, 2019.

Support continues for (but will be dropped at future point To Be Declared):

- Classic Jobless Apply on Full or Global Talent Gateways.
- Classic Basic Talent Gateways (such as Add candidate or Add contact).
 - However, we do have responsive stand-alone Gateway Questionnaire feature that might be used to replace some simple external Basic Talent Gateways.

Note: Discontinued support means that, for these areas of classic candidate experience, IBM will not accept defects, will not test for nor guarantee accessibility and that no RFEs nor feature development will be considered, even though legacy configurations of these types may still be available for you to use.

Caution: Classic Full Talent Gateway features may be shut off at IBM's discretion.

Action May Be Required:

If you haven't already, we require that you upgrade any Classic Full or Global Talent Gateways to use the responsive candidate experience and that you complete HR Status Category mapping (which is required for candidates to access the Application Details page, including posted Offers, Documents and Forms [i.e., responsive candidate portal]).

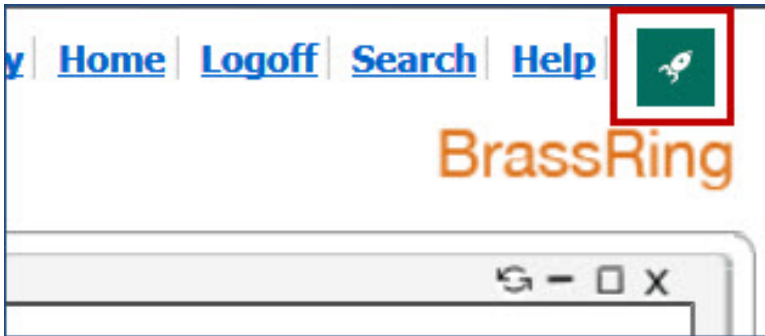

Want to get started on the IBM Responsive Candidate Experiences but don't know where to start? Watch our [Responsive Apply Overview and Configuration Webinars](#) to understand who should be involved, an example project timeline, configuration instructions, and much more! IBM has also hosted multiple sessions on Migrating to the Responsive Talent Gateways. Check out the recordings on our [Training and Enablement site](#). You can also reach out to your IBM Kenexa Representative with any questions or concerns.

BrassRing Classic UI - Retirement

The **Classic User Interface (UI)** of IBM Kenexa® BrassRing® on Cloud will be sunset throughout 2019, and **no longer be accessible after the February 2020 BrassRing Build**. This is in light of the New BrassRing Recruiter UI that has been available since February of 2015.

Note: This is in reference to the Recruiter UI, and **not to be confused with Classic Talent Gateways (candidate experience)** which were sunset on December 31st, 2017.

Currently, users toggle between the classic and new UI via the "Rocket Ship"

icon in standalone BrassRing or via the "Enhanced Experience" option in Talent Suite. While the default settings for user types update to the new UI in **May (staging)** and **August (production)**, the toggle remains in tact, allowing users to switch back and forth, until **February of 2020** when the classic UI is retired. At that time, the toggle is removed and the classic UI will not be accessible in any environment of BrassRing.

IBM strongly urges and recommends that your organization transitions to use of the new UI as soon as possible if you haven't already! The new UI:-

- Provides a smoother recruiter experience while being away from the office/work space.
- Offers a clean and fast approach to BrassRing functions.
- Has the ability to brand the pages and set defaults per persona.
- **MOST IMPORTANT!** All new features and functionality improvements, such as the Advanced Search feature and the Metrics Dashboard, are **only available in the new UI**.

Not sure where to start? Our Training and Enablement Team offers a wealth of resources regarding the new UI on the [BrassRing Knowledge Center \(KC\)](#).

Please feel free to cascade these useful tools to your team![Training and Enablement Session: BrassRing New UI](#) (Scroll down to 2018 sessions to find this recording from July 17th)

Thank you for your support and partnership as we look to the future of BrassRing and your Recruiter Experience!

Discussion: We Want Your Feedback About Upcoming Features

The IBM BrassRing team has adopted a Dark Launch release process for high-impact features. This entails having select features rolled out to the **Staging-environment-only** for an undetermined amount of time. This process allows you to test and provide feedback on those select features. The Production release date is then determined based on feedback collected, testing, additional development required, etc.

How do you provide feedback about the features released to Staging only?

A new discussion link is included in the feature description of the Release Notes document. (Only select features will have this discussion link included.) The link directs you to the Salesforce Support Community and it requires you to have an IBM ID to post your feedback.

Note: Please note, this discussion link is to be used to provide feedback on the new feature. For questions about functionality not answered via the release notes, please reach out to the Product Consulting team for additional details.

Benefits Include:

- Releasing specific features to Staging only allows you to test the feature and complete any change management activities required within your recruitment team.
- A quick and easy way to submit your valuable feedback about an upcoming feature.
- Monitored by the IBM Offering Management team, meaning your feedback is getting directly to the team responsible for the future direction of the BrassRing product.
- Ability to view feedback provided by other clients

We look forward to your participation and feedback!

Client Training and Enablement Sessions

Please join the IBM Talent Management Solutions Training team for our regularly scheduled Training and Enablement sessions. These sessions may include release information, product demonstrations, implementation processes, and so much more!

Visit our [site](#) often for the most up-to-date schedule and agenda topics!

Enhancements - You Asked We Listened

We are proud to inform that this build introduces a number of features that were developed in response to clients' **Request for Enhancement (RFEs)**. IBM Kenexa is pleased to deliver these features in response to your responses and comments.

Requests For Enhancement (RFEs)

The following features were delivered in response to **RFEs**.

- BrassRing home page - New My Approved Reqs Tab (Staging - Only)
- BrassRing home page - New My Reqs Pending Approval Tab
- BrassRing Home page - Req Filters
- Candidate Grids - View Selection number
- Talent Record - Action Log Filters

Dark Launch Features

Dark Launch features are those features that are released to **Staging environment - Only** and are NOT released to Production environment for a considerable amount of time. This process gives an opportunity and enough time to test these features thoroughly before they are available in the production environment.

BrassRing home page - New My Approved Reqs Tab

Note: This feature is deployed to **Staging environment - Only** with this release. This feature **will NOT be released to Production on April 15th**. A Production date is to be determined.

Starting this release, a new tab is available to BrassRing users to be added to their BrassRing home page. The **My Approved Reqs** tab provides users visibility into a list of all approved requisitions without having to go further into the BrassRing system to view them. The user sees requisitions that they are associated to (the req creator, listed Recruiter or Manager, or on the Requisition team).

How do **existing** users get this new tab?

On the BrassRing home page

1. Select **Edit Tabs**
2. Select **My Approved Reqs**
3. Move it to the selected tabs
4. Submit

The screenshot shows the BrassRing interface with the 'Edit Tabs' dialog box open. The dialog box has a title 'Edit Tabs' and a section 'Available Tabs' containing a list with one item, 'My Approved Reqs', which is highlighted with a red border. At the bottom of the dialog are 'Submit' and 'Cancel' buttons. The background shows a navigation bar with 'Hiring', 'Home', and 'Metrics Dashboard'. A sidebar on the left contains a 'Hello, [Name]!' greeting, a 'BrassRing Highlights' section, and a 'Filters' section with options like 'Filter name: Not Saved', 'Save Filter | Load Filters', and 'Manage Saved Filters'. The main content area shows 'My Open Reqs (18)' and 'My Task' tabs.

RTC internal reference # 96572.

Responsive Talent Gateways - Responsive Jobless submission

Note: This feature is deployed to **Staging environment - Only** with this release. This feature **will NOT be released to Production on April 15th**. A Production date is to be determined.

Clients can now configure the responsive Talent Gateways to either allow candidates to submit Resume/CV without applying to a job with better responsive candidate experience, or restrict candidates from doing so. If clients would like to allow jobless submission, that can be done by selecting a specific Responsive Gateway Questionnaire from a new setting in the Responsive Talent Gateway section. Starting this release, the candidates would have an enhanced experience during the jobless submission workflow.

How do clients get this feature:

The following Talent Gateway settings were removed from the TG details screen:

- Site general job submission type
- Remove general job submission link from candidate landing page

Replacing these two settings, a new setting **General (jobless) candidate submission type** is added in the Responsive layout configuration screen under **Talent Gateways > Responsive layout details > Welcome / Search > Resume / CV General Submission**. The default option for this setting is **Hide this section**, followed by a list of responsive Gateway questionnaires that belong to the same locale as the Talent Gateway.

Responsive Layout Details - Gateway To Talentz

Jobs near me

Featured jobs
 Featured jobs

Most recent jobs
 Most recent jobs

Hide highlighted jobs section
 Do not list any jobs on the initial search screen

If the Hide Highlighted jobs setting is checked, no jobs will be listed on the initial Search screen (regardless of other 'Highlighted jobs' settings that may be checked). This is a GLOBAL level setting and will override any settings in the 'Highlighted jobs' section.

9 Resume / CV General Submission

General (jobless) candidate submission type

General submission intro text

General submission button text

Selecting "Hide this section" provides the same result as checking the old setting Remove general job submission link from candidate landing page. Selecting any other Gateway questionnaire provides the same result as selecting a Gateway questionnaire from the old setting: "Site general job submission type".

Based on this configuration, when a candidate applies via the Jobless apply workflow:

- Candidates do not see a job title on-screen or in browser title.
- The apply screen does not show options to save.
- The candidates do not see WOTC page (if GQ contains WOTC widget).
- The candidates do not see any job-specific questions.
- On the GQ confirmation page, the View applications button is not displayed.

Candidates that have already applied on a locale cannot apply again within the same locale.

Your feedback is important! To provide feedback about this feature, go to the [Discussions Forum post](#).

RTC internal reference # 97608, 97609.

Candidate Form - Approval Process Improvement

Note: This feature is deployed to Staging environment - Only with this release. A Production date is to be determined.

Before this release, the standard sequential Candidate Form approval process rerouted the form for approval if the Approvers were updated or changed exclusively while the form approval was in flight. With this release, organizations can configure their Candidate Form approval process to allow edits to the Approvers without having to restart the whole approval process. This change enhances the user's ability to update approvers thus giving them the ability to delegate the approval to another user if the original approver is not available.

As a part of this feature and based on client feedback, the following updates are made after its initial release to Staging environment during Release 18.11.12:

- After a candidate form is sent for approvals for the first time, if any edits are made to the form, the button label is changed. Save and Send for Approvals is to **Save and Resend for approval**.
- If the user wants to update the form and does not want to change the approval routing, they must select the Submit button. A warning message clearly mentioning this information is provided stating: **Original approval(s) status(es) will be reset. The form will be sent for new approval(s). If your intention is just to save changes, please cancel and use the submit button instead. Do you wish to continue?**

To read more about this feature, go to [November 2018 release notes](#) on the IBM Knowledge Center.

Your feedback is important! To provide feedback about this feature, go to the [Discussions Forum post](#).

Visible Changes

The current release of IBM Kenexa BrassRing on Cloud includes the following visible changes for BrassRing and IBM Kenexa Lead Manager.

BrassRing home page - New My Reqs Pending Approval Tab

Note: This feature was deployed to **Staging environment - Only** with release 19.03.11. **This feature is available in the Production environment starting this release.**

Starting this release, a new tab is available to BrassRing users to be added to their BrassRing home page. The **My Reqs Pending Approval** tab provides users visibility into a list of all of their currently Pending requisitions without having to navigate further into the BrassRing system to view them. The user sees requisitions that they are associated to (the req creator, listed Recruiter or Manager, or on the Requisition team).

How do **existing** users get this new tab?

On the BrassRing home page

1. Select **Edit Tabs**
2. Select **My Reqs Pending Approval**
3. Move it to the selected tabs
4. Submit

Note:

- Users see the My Reqs Pending Approval tab only if the user type has the privilege to view their pending requisitions.
- Admins cannot to add the tab automatically for existing users. New users see this tab automatically on their home page if the user type has the privilege to view their reqs in a Pending status.
- Users have an approve action available on the Grid view of the tab. This is displayed if the req is pending the user’s approval.
- The My Reqs Pending Approval tab has the following defaults:
 - Card View (Personas affected: Administrator, HR User, Recruiter, Reporting/Analytics and Default)
 - Auto req ID
 - Job Title
 - Date Created
 - Location/Division (Req standard field)
 - Manager
 - Next Approver
 - Card View (Persona affected: Manager)
 - Auto req ID
 - Job Title
 - Date Created

- Location/Division (Req standard field)
- Recruiter
- Next Approver
- Grid View (Personas affected: Administrator, HR User, Recruiter, Reporting/Analytics, and Default)
 - Auto req ID
 - Job Title
 - Date Created
 - Location/Division (Req standard field)
 - Manager
 - Next Approver
 - Approve Action
- Grid View (Persona affected: Manager)
 - Auto Req ID
 - Job Title
 - Date Created
 - Location/Division (Req standard field)
 - Recruiter
 - Next Approver
 - Approve Action

RTC internal reference # 96571.

BrassRing Home page - Req Filters

BrassRing users can manage requisitions in a better way on the home page tabs now. Starting this release, all the requisition related tabs on the BrassRing home page feature filters. Filters come handy to users that have a number of requisitions to manage. Users can save and manage filters specific to each tab and each view of a tab.

Req ID	Title	Location/Division	Manager	New	Total
11BR	Consultant Info Dev	N/A	[Redacted]	6	7
26BR	Hiring Solutions Expert	N/A	[Redacted]	0	0

< 1 >

The screenshot shows the IBM Hiring dashboard. At the top, there is a blue header with the IBM logo and a 'Hiring' title. Below the header, there are navigation links for 'Home' and 'Metrics Dashboard'. A personalized greeting 'Hello, [Name]!' is displayed. A 'BrassRing Highlights' box contains tips for recruitment excellence. Below this, there are tabs for 'My Open Reqs (2)', 'My Tasks (2)', 'My Candidates', 'My Reqs Pending Approval (9)', and 'Edit Tabs'. The main content area is divided into a filter management panel on the left and two job requisition cards on the right. The filter panel, highlighted with a red box, shows 'Filters (1)' with a 'Not Saved' status and options to save or manage filters. It also includes a 'Refine Results' section with a search bar and various filter criteria like 'Req Template', 'Date Opened', 'Date Created', 'Language', and 'New Candidates'. The job requisition cards for '11BR' and '26BR' show details like title, location, and manager, along with a summary table of 'New' and 'Total' counts.

Filter management: By default, whenever filters are edited and a criteria is applied, the Filter name is displayed as **Not saved**. When a filter is saved in a specific view of a tab, that filter is not available in a different view or a different tab. For example, if a user saved Filter A in the Grid view of the My Open reqs tab of the home page, the same filter is not available in the cards view. When the user toggles to cards view after saving Filter A, the Filter name is changed to 'Not saved', however the filter criteria selection is retained. If required, user can again save this filter for the current view.

Saved Filter in Card view.

The screenshot displays the IBM Kenexa BrassRing on Cloud interface. At the top, there are navigation tabs: "My Open Reqs (2)", "My Tasks (2)", "My Candidates", "My Reqs Pending Approval (1)", and "Edit Ta". The "My Reqs Pending Approval (1)" tab is selected and underlined.

Below the navigation tabs, there is a "Filters (3)" section with a left-pointing arrow. Inside this section, a "Filter name: MnD" is displayed, enclosed in a red box. Below the filter name, there are links for "Save Filter", "Load Filters", and "Manage Saved Filters".

Below the filter section is a "Refine Results" section with a "Clear" button and a search input field containing the text "Search within results".

Below the refine results section is a "Req Template" section with a dropdown arrow. Below that is a list of filter criteria, each with a dropdown arrow and a count: "Date Created" with a count of 2, "Language", "Recruiter", and "Manager" with a count of 1. This list is enclosed in a red box.

Below the filter criteria is an "Edit Filters" link.

On the right side of the interface, there is a card view for a specific request. The card title is "28BR". Below the title, the following details are listed: "Title Consultant", "Date Created 28-Feb-2019", "Location/Division", "Manager", and "Next Approver".

At the bottom of the card view, there is a pagination control showing "< 1 >".

After toggling the view to Grid view, filter criteria is retained, but filter is not saved.

The screenshot shows the BrassRing interface with the 'My Reqs Pending Approval (1)' tab selected. On the left, a 'Filters (3)' panel is visible, containing a 'Filter name: Not Saved' field, 'Save Filter | Load Filters', and 'Manage Saved Filters' options. Below this is a 'Refine Results' section with a search box and a list of filter criteria: 'Req Template', 'Date Created' (with a count of 2), 'Language', 'Recruiter', and 'Manager' (with a count of 1). The main table displays one row of results with columns for 'Auto req ID', 'Title', 'Date Created', and 'Location'. The row contains the values '28BR', 'Consultant', '28-Feb-2019', and 'Sample'.

If a user selects a specific filter criteria and logs out of BrassRing without saving the filter, the filter criteria selection is retained when the user logs back into BrassRing.

RTC internal reference # 117401.

Candidate Grids - View Selection number

When a user needs to select multiple candidates spanning across a number of pages in a candidate search grid, it becomes difficult to keep track of the total number of candidates selected. Based on client request, this is now addressed.

Starting this release, BrassRing users can view the number of candidates that they have selected across the pages of a candidate search grid. This helps users improve accuracy while managing candidate related tasks in BrassRing. As the users navigate the pages and select candidates, the selection count on the candidate grid displays the number of candidates selected in total.

Talent Record - Action Log Filters

Candidate Talent Record in the classic user interface of BrassRing has an option to filter the view of the action log. In our efforts to provide all features in the new UI, the filter option is now provided in the Talent Record of the BrassRing new UI. Starting this release, while seeing a candidate's Talent Record, users can filter the Action log view to see records of a specific req.

BrassRing New UI Talent Record before this release:

RTC internal reference # 117403.

Talent Records - Notes Tab Enhancement

Previously, when a lengthy note was added to a candidate's Talent Record, the entire notes was displayed in the Note column in the Notes tab. This occupied the entire screen and the rest of the rows were not visible thereby rendering a bad user experience.

Starting this release, the view of the Notes tab is updated to provide better user experience. When a lengthy note is added, the Note column in each row displays only limited number of lines of the note. These lines act as a hyperlink and when user selects these lines, the entire notes is displayed.

Waldgast, Robert - Note

The fables originally belonged to the oral tradition and were not collected for some three centuries of were being ascribed to him, although some of that material was from sources earlier than him or can continued until the present, with some of the fables unrecorded before the later Middle Ages and still still being added to the Aesop corpus, even when they are demonstrably more recent work and some

Manuscripts in Latin and Greek were important avenues of transmission, although partial treatment collections of Aesop's fables were among the earliest books in a variety of languages. Through the m reputation as a fabulist was transmitted throughout the world.

Initially, the fables were addressed to adults and covered religious, social and political themes. They v particularly used for the education of children. Their ethical dimension was reinforced in the adult wo an adaptation to drama and song. In addition, there have been reinterpretations of the meaning of th

BrassRing and Workbench - Support User Account Deactivation

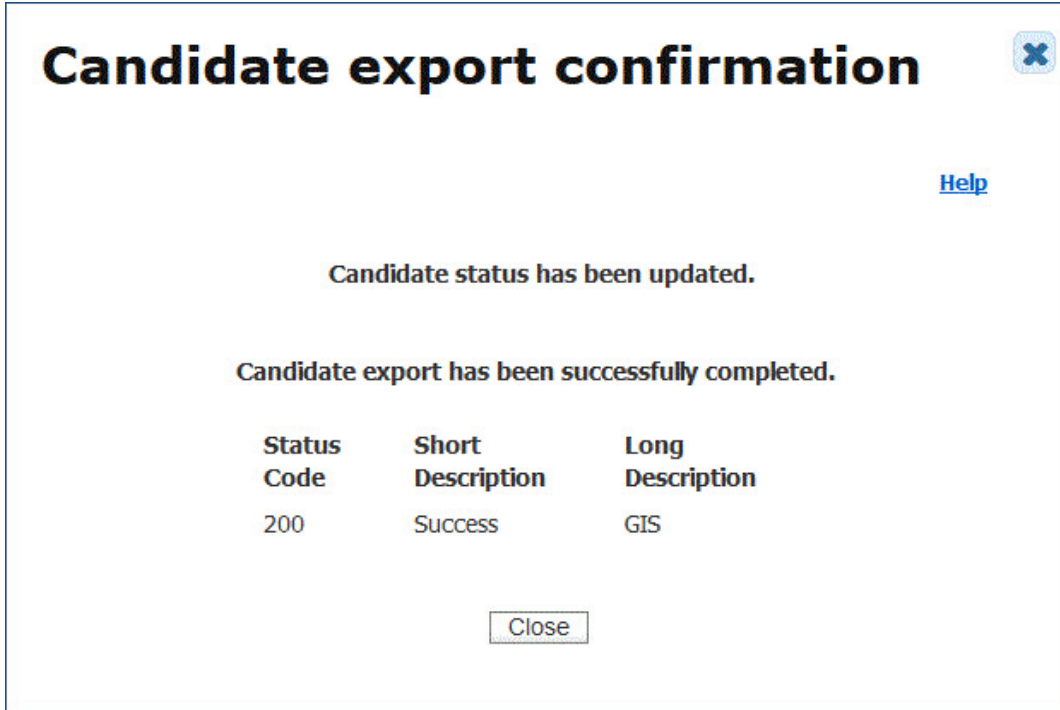

As an enhanced security measure, BrassRing and Workbench support user accounts that do not have any activity in the past 180 days are deactivated starting this release. Similarly, newly created BrassRing and Workbench support accounts that do not have any user activity consecutively for 14 days are also deactivated. If you are a BrassRing or Workbench support user and are unable to login, please contact BrassRing support for reactivation.

RTC internal reference # 111641, 117679.

HR Status - Integration Confirmation message

It was observed that at times, integrations based on HR Status updates are not running as they must. This behavior has been observed intermittently. The integration related pop-up message is not displayed when the integration did not run based on the HR status update. Starting this release, a new

modal dialogue with confirmation message about the integration is displayed instead of the pop-up message. This ensures that the integrations are run without any issues based on HR status updates.

RTC internal reference # 112019.

Communication Templates - Attachment File Size

Previously, while creating a communication template, if a BrassRing Admin user tried to upload an attachment that is more than 4MB, the upload failed. However, there was no message displayed indicating that the file is more than the permitted size. This resulted in confusion. For better user experience, starting this release, when the size of an attachment that is being uploaded exceeds the permitted 4MB, an error message is displayed stating: **File size cannot be greater than 4 MegaBytes.**

RTC internal reference # 117881.

Responsive Talent Gateways - Tables in Job Description

Starting this release, if a table is added in the job description section of a req, the job description within the Responsive Talent Gateway displays the table. The following screens display tables:

- Job details page in the Responsive Talent Gateways.
- Application Details > View Job Description.
- Job Details preview in BrassRing.

Responsive Talent Gateways - Skills Field Maximum Entries

In the Responsive Talent Gateways and candidate zone profile page, the Skills field has a maximum limit of 50 entries. The entries to this field can be made by keying in custom skills or selecting existing skills. However, it was observed that, if a candidate already selected 50 skills and is keying in custom skills, the system was accepting up to 52 skills.

Starting this release, the behavior of the skills field is updated for consistency. When the number of skills selected or added is less than 50, an information message is displayed at the top of the page stating: **50 skills maximum**. When the number of skills added is less than 50 and candidates select skills that add up the number to more than 50, the list remains open, however, an error message is displayed stating **You have added the maximum number of skills**. This message is removed when the selection is reduced back to 50. This change ensures consistent and accurate behavior of the field.

RTC internal reference # 113716.

Configurable Changes

The current release of IBM Kenexa BrassRing on Cloud includes the following configurable features for BrassRing and IBM Kenexa Lead Manager. Configurable features must be configured or turned on to be visible and available to users.

Responsive Talent Gateway - Apply With LinkedIn

As previously informed, LinkedIn upgraded the Apply with LinkedIn API. BrassRing uses this API to allow candidates to import their LinkedIn profile as part of the application or profile building process

in responsive Talent Gateways. Based on this LinkedIn change, the original Profile import feature was removed during release 18.11.12 and the profile building feature in the Responsive Talent Gateways is updated. More information about this change is available at this [page](#).

Further to this change, starting this release, based on configuration, candidates can apply to jobs on the Responsive Talent Gateways by using LinkedIn. A new **Apply with LinkedIn** button is available to those candidates that already logged in to their LinkedIn profile on the same browser as they are logged in to the Responsive Talent Gateway. The **Apply with LinkedIn** is available on the **Job details** page next to the regular **Apply**.

Note: As per guidelines from LinkedIn, your organization is required to enable either the [Skip Sign-in \(Bypass Login\)](#) or [Disable Sign-in](#) functions on the Responsive Talent Gateways to use Apply with LinkedIn.

When candidates select **Apply with LinkedIn**, **LinkedIn confirmation** windows is displayed for confirmation to proceed. When candidate provides confirmation, the candidate's LinkedIn information is pulled into their Talent Gateway profile. The following LinkedIn profile data of the candidate is received.

Mandatory requirement for LinkedIn candidate application:

- First Name
- Last Name
- Email address
- Web address (Candidate's LinkedIn profile URL)

Optional data requirement for LinkedIn candidate application:

- Country
- Phone Number
- Up to three education fields
- Up to five Work experience fields
- Up to 50 skills fields

The candidate's Talent Gateway profile information is overwritten by the candidate's LinkedIn profile information if it belongs to the same fields. Candidates cannot submit duplicate applications by using the Apply with LinkedIn feature unless the requisition supports multiple submissions. After the candidate selects Apply with LinkedIn, the Responsive Gateway Questionnaire is displayed. This Gateway questionnaire has the respective fields that are completed with information from the candidate's LinkedIn profile or the Talent Gateway profile. The candidate proceeds to complete and submit the application as with the regular job submission workflow.

Note:

- The new Apply with LinkedIn option is available to candidates on the **Job Details** page only and not for profile import.
- There is no integration with LinkedIn's mobile applications. Candidates are required to log in to their LinkedIn profile on a web browser despite using a mobile app.
- The Apply with LinkedIn button's label is displayed in the language of the candidate's LinkedIn profile. It may or might not match the locale of the Talent Gateway in which the candidate is submitting their application. For example, if the candidate's LinkedIn profile is in French and the candidate is on a Spanish locale responsive Talent Gateway, the Apply with LinkedIn button's label is displayed in French.
- The configuration for this LinkedIn feature does not overlap with any other LinkedIn feature offerings that are used within BrassRing. Each of the LinkedIn integration features like Apply with LinkedIn, and Signing in using LinkedIn, have their own configurations.

Note: Best Practice Suggestions:

- Clients should not bypass **Job details** if they want candidates to be able to use this feature. Apply with LinkedIn feature is available only on **Job details**.
- Clients should not use read-only fields for Internal SSO TG (XML profile import) if they want candidates to be able to use this feature.
- Regular Talent Gateway apply has a better profile import (with full resume data extraction) if the candidates have a resume file. Therefore, we recommend avoiding this feature unless clients expect significant candidate volume where candidates have a LinkedIn profile and do not have resume files that are available to upload (from their laptop or device, or cloud storage applications like Google Drive or Dropbox).

How do Clients get this feature (Workbench Configuration)

As a prerequisite for configuring this feature in Workbench, the workbench administrator must have login credentials for Apply with LinkedIn-IBM client admin account on LinkedIn Recruiter (appropriate for environment and Parent keys). LinkedIn Recruiter is separate login from the regular LinkedIn (candidate UI). If a LinkedIn user has access to both LinkedIn recruiter and LinkedIn, the user must authenticate in LinkedIn Recruiter before they access Workbench Configuration. Client Workbench administrators must have a paid LinkedIn account for this feature before they can configure the feature in Workbench.

To configure the new Apply with LinkedIn feature, new settings and options are provided in various sections of the Workbench. Client setting **Enable Social Media Integration** setting now has a new check box option **LinkedIn - Apply with LinkedIn**. This option is by default, cleared for all clients.

Before this release:

Enable Requisition Creator to Opt-Out from Req Team No Yes

Enable Scheduled Process Queue No Yes

Enable Social Media Integration LinkedIn
 LinkedIn Referrals
 Twitter

Enable social media integration with Talent Record No Yes

Enable Social Media Integration-maximum allowed company accounts(1-25)

Enable Social Media Integration-maximum allowed personal accounts(1-25)

After this release:

Edit client settings

Enable pre-filtered document templates No Yes

Enable Requisition Creator to Opt-Out from Req Team No Yes

Enable Scheduled Process Queue No Yes

Enable Social Media Integration LinkedIn
 LinkedIn - Apply with LinkedIn
 LinkedIn Referrals

Enable social media integration with Talent Record No Yes

Enable Social Media Integration-maximum allowed company accounts(1-25)

Enable Social Media Integration-maximum allowed personal accounts(1-25)

Based on the configuration of the client setting Enable Social Media Integration, a new row **LinkedIn - Apply with LinkedIn** appears in the Social Media configuration section of Workbench Settings. Path: **Tools > Settings > Social Media Configuration**. Before configuration, all columns of this row are blank and the Administer configuration column has a plus icon. Selecting this icon opens the **Administer configuration - Apply with LinkedIn** screen. If the Workbench Administrator is not already logged in to LinkedIn recruiter, Sign-in and Join now hyperlinks are available on this page for the administrator to either sign into an existing LinkedIn account or to join LinkedIn.

Before configuration

The screenshot shows a web interface with a blue header containing 'Tools', 'Training', and 'Admin' dropdown menus, and 'Home', 'Help', and 'Term' links. Below the header, the page title is 'Social Media Configuration'. A table lists various social media sites with columns for 'View configuration', 'Administer configuration', and 'View'. The 'LinkedIn - Apply with LinkedIn' row is highlighted with a red box.

Social Media site	View configuration	Administer configuration	View
Facebook		+	
LinkedIn		+	
LinkedIn - Apply with LinkedIn		+	
LinkedIn Referrals			
Twitter		+	

After starting configuration

The screenshot shows the same web interface but with the page title 'Social Media/Referral Configuration'. The table now includes 'Referral Workflow' and 'Send via Email' rows. The 'LinkedIn - Apply with LinkedIn' row is highlighted with a red box, and the 'Administer configuration' column now contains document icons instead of plus signs.

Social Media site / Referral Workflow	View configuration	Administer configuration
Facebook		
Google		+
LinkedIn		+
LinkedIn - Apply with LinkedIn		
LinkedIn Referrals		
Send via Email		+
Twitter		+
WeChat		+

The first launch of this page automatically retrieves the ClientAppKey and authorizes LinkedIn API to show "Request" button. Administrator can request for the Apply with LinkedIn feature in this screen.

Administer configuration - Apply with LinkedIn Audit Trail

App keys for Apply with LinkedIn
Client App Key : `77b8d8jggqtoqrk`

- If you are having trouble configuring Apply with LinkedIn, please contact your LinkedIn Representative.

LinkedIn Match 🔒 Not currently available
Enable to see how well an applicant matches your job requirements in your ATS. LinkedIn Match will also order applicants by their match for the role, so well-matched candidates appear at the top of the list.

[Close](#)

After configuration

The screenshot shows the 'Administer configuration - Apply with LinkedIn' window in Workbench. At the top, the 'App keys for Apply with LinkedIn' section has a 'Client App Key' field containing '770aapj1fwtky3', which is highlighted with a red box. Below this, a message states: 'If you are having trouble configuring Apply with LinkedIn, please contact your LinkedIn Representative.' The main configuration area is titled 'Request an Integration' and includes several sections: 'Recruiter System Connect (RSC)' (Not currently available), 'Apply with LinkedIn' (Enabled, highlighted with a red box), 'Apply Starters Explorer' (Not currently available), and 'LinkedIn Match' (Not currently available). A 'Close' button is located at the bottom center of the window.

Based on the Client setting configuration, the Talent Gateway setting **Social media integration** is populated with a new option **LinkedIn - Apply with LinkedIn**. If the client setting is on, but social media configuration is not completed, Workbench administrator sees an error message on selecting "LinkedIn - Apply with LinkedIn". The error does not prevent the user from selecting this option. However, the Apply with LinkedIn button is not displayed on that specific Talent Gateway until the client level configuration is completed.

Social Media Integration:

- Facebook
- LinkedIn
- LinkedIn - Apply with LinkedIn**
- Twitter

Social Media Instructions: [Text Area] [Reset to default]

Default message for Social Media posting: [Text Area] [Reset to default]

Limitations and Things to know:

- The Apply with Linked feature is for single job applies only.
- Only available on the **Job Details** page, therefore, if your organization skips the **Job Details** page your candidates do not have this action available to them.
- We are constrained by LinkedIn requirements for this feature and cannot create a custom button label, format, location, the widget’s text/font/size/colors, these are all static attributes.
- The language and translations are supplied by LinkedIn and based on the candidate’s profile language; which may or might not match the Talent Gateway site language the candidate is applying through.
- There is no integration with the LinkedIn app on phones or tablets. This means candidates using those devices will still need to be logged into LinkedIn via a browser to see the Apply with LinkedIn button

RTC internal reference # 112837, 114495.

Candidate Experience Enhancements - Codes

Note: This feature was deployed to Staging environment - Only with Release 19.03.11. This feature is going to be available in the Production environment with Release 19.04.08.

In the process to continually improve the BrassRing Responsive Talent Gateways, we are excited to announce that Code questions are now supported in the Production environments with this release. The Code type widget was not available for Responsive Gateway Questionnaires previously. This unavailability meant that your organization might not ask questions by using the code lists, such as "How did you hear about this opportunity" (Source Code question). Now, the Code widget is available for creating or editing a Gateway Questionnaire and then presented to candidates when applying for a requisition on the Responsive Talent Gateways.

How do you configure this feature? The location of the Codes questions is managed in the Gateway Questionnaires. The questions that were asked and the attributes of the questions is maintained at a Talent Gateway level. The following steps define how to configure each piece.

1. Tools > Talent Gateways > Edit the Responsive Talent Gateway > Choose when applying field

- This section is an existing section on the edit Talent Gateway page.
- If any codes are selected in this section to display, the questions are placed in the location the Workbench admin places the Codes widget within the Gateway questionnaire.

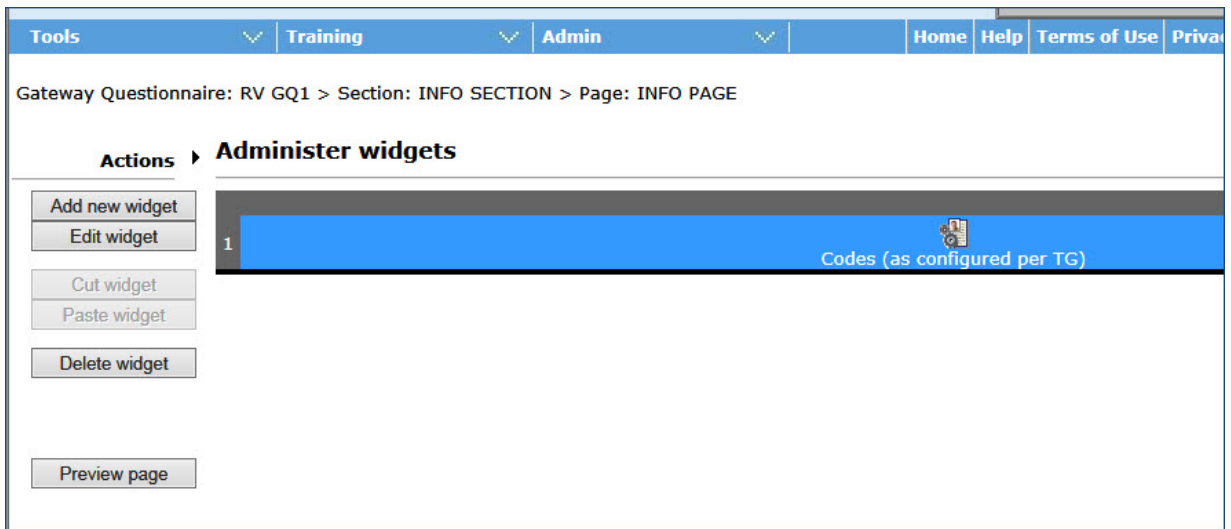

- If the Workbench admin adds the Codes widget to the Gateway Questionnaire, and there are no codes that are selected to display on the edit Talent Gateway page, the widget is ignored and the candidate sees the message **No codes are currently configured for this site.**
- The code field attributes respected on the Gateway Questionnaire are:
 - Show / Don't Show / Codes Only / Description / Only / Codes and Descriptions
 - Select **Show** if you want the code question to display ALL options to the candidate.
 - Select **Don't Show** if you do not want the code question to display at all.
 - Select **Codes Only** if you want to show only the Code of the option to the candidate.
 - Select **Description Only** if you want to show only the Description of the option to the candidate.
 - Select **Codes and Descriptions** if you want to show both Code and Description to the candidate.
 - Custom Label
 - The Custom Label field is used to define the question text (text that the candidate sees).
 - If the code is selected to display but does not have a Custom Label the value that is entered in the **Label to Talent Gateway candidates** field is displayed. (**Workbench > Tools > Settings > Code types > edit Code type**)
 - If both the Custom Label field and Label to **Talent Gateway candidates** is blank, then the candidate views the Code Type's description (name).
 - Required / Optional.
 - Single-select / Multi-select.
 - Include all values / Filtered list.

2. **Workbench > Tools > Gateway Questionnaires > Add new or select an existing draft Gateway questionnaire > Administer Sections/Pages > Administer widgets > Add/edit Widget > Complex Widgets > Codes (as configured per TG).**

The screenshot shows the 'Widget properties' dialog box with the following configuration:

- Question Text Attachments **Complex Widgets**
- Resume upload**
- Cover letter upload
- Education builder
- Experience builder
- Codes (as configured per TG)**
- Job specific questions
- Work Opportunity Tax Credit
- Optional** Required

Buttons at the bottom: Save, Clear, Cancel

Note:

- Per an existing limitation, code values cannot be converted. Only the **Custom Label** can be converted at the Talent Gateway level.
 - Subsequent applications by the same signed in candidate (or same session for Talent Gateways with the disable sign-in or skip sign-in enabled) will NOT retain the selected value for the code question. The candidate needs to select a new option with each new apply process.
 - The attributes of Disable pre-fill response, Referral, formatting, and other attributes, are not supported with the Responsive Talent Gateways.
 - Only one Code widget can be added to a Responsive Gateway Questionnaire. This Code widget shows all code types that are selected on Talent Gateway to which the candidate is applying
- RTC internal reference # 80035, 87605.

Codes - Talent Gateway Details Labels

To provide clear labels for the Workbench users that configure codes, the following labels are updated:

- Automatically pass is updated to **Codes - automatically pass on submission**.
- Choose when applying is updated to **Codes - choose when applying**.
- In addition to these changes, a note is added stating: **Note: Codes will not display for responsive apply unless your posted GQ contains the Codes widget and you have one or more code types set to show (=selected (#) or select all and not "Don't show")**.

BrassRing Workbench

The current release of IBM Kenexa BrassRing on Cloud have the following new features for IBM Kenexa BrassRing Workbench. Configurable features must be configured or turned on to be visible and available to users.

Workbench - Refresh Java script

Note: This refresh is required only if you are a Workbench user and only if you use **Internet Explorer 11** to browse Workbench.

Due to the latest updates, for Release 19.04.08, it is required to access Workbench with the Internet Explorer 11 browser and use **Control + F5** function to refresh the Java Script. This is because, Internet Explorer 11 stores old Java script files, even after the browser's cache is cleared.

Responsive Talent Gateways - Talent Gateway Embedding Configuration

BrassRing Responsive Talent Gateways can currently be embedded into frames of any other websites. This feature results in a potential vulnerability where the Talent Gateway can be embedded in a malicious website and thereby candidate actions like mouse clicks within such website can be misdirected. To overcome this vulnerability and ensure security, starting this release, clients can configure whether each of their Responsive Talent Gateways can be embedded in another website.

A new setting **Allow this site to be embedded in other sites** is added in the Responsive Talent Gateway Layout configuration screen. This setting has three options **Always Allow**, **Never Allow**, **Allow only these URLs**. When the third option is selected, a text box is displayed. URLs of the websites that need to be white-listed for embedding the Talent Gateway must be entered in this text box. All existing Responsive Talent Gateways are by default configured to Always Allow.

Workbench Path: **Tools > Talent Gateways > [select Talent Gateway] > select Check mark for Responsive Layout column.**

Responsive Layout Details - Gateway 2 Talents Audit Trail

General

User sign in and session handling

Sign in availability for candidates
Require sign in (*recommended for best candidate experience*)

User inactivity time-out period (in seconds) 300

Standalone Apply

Use as standalone Gateway Questionnaire
No (this TG retains search functionality)

Embed TG in other sites

Allow this site to be embedded in other sites

Always Allow
 Never Allow
 Allow only these URLs

Posted Documents & Forms per Application (i.e., "responsive candidate portal")

Notification text: You have received a document with subsidiary form (e.g., offer) for this job

Embed TG in other sites

Allow this site to be embedded in other sites

Always Allow
 Never Allow
 Allow only these URLs

Allow URLs (comma separated list)

http://www.yoursite.com,https://www.anothersite.com

The HTTP Response Header details are of two types:

- X-frame-options: This is old HTML header controlling frame-able response. This header type response is used by older browsers. Modern browsers ignore this response. This type of header supports only a single domain for white-listing when the third option is selected.
- Content-security-policy: This type is the new HTML header controlling frame-able response. This is respected by modern browsers. Old browser versions might or might not respect this response. Content-security-policy supports multiple domains for white listing.

Note:

This feature is not available for Classic Talent Gateways and Basic Talent Gateways.

All members of a Global Talent Gateway, are configured with the same setting option.

Best Practices:

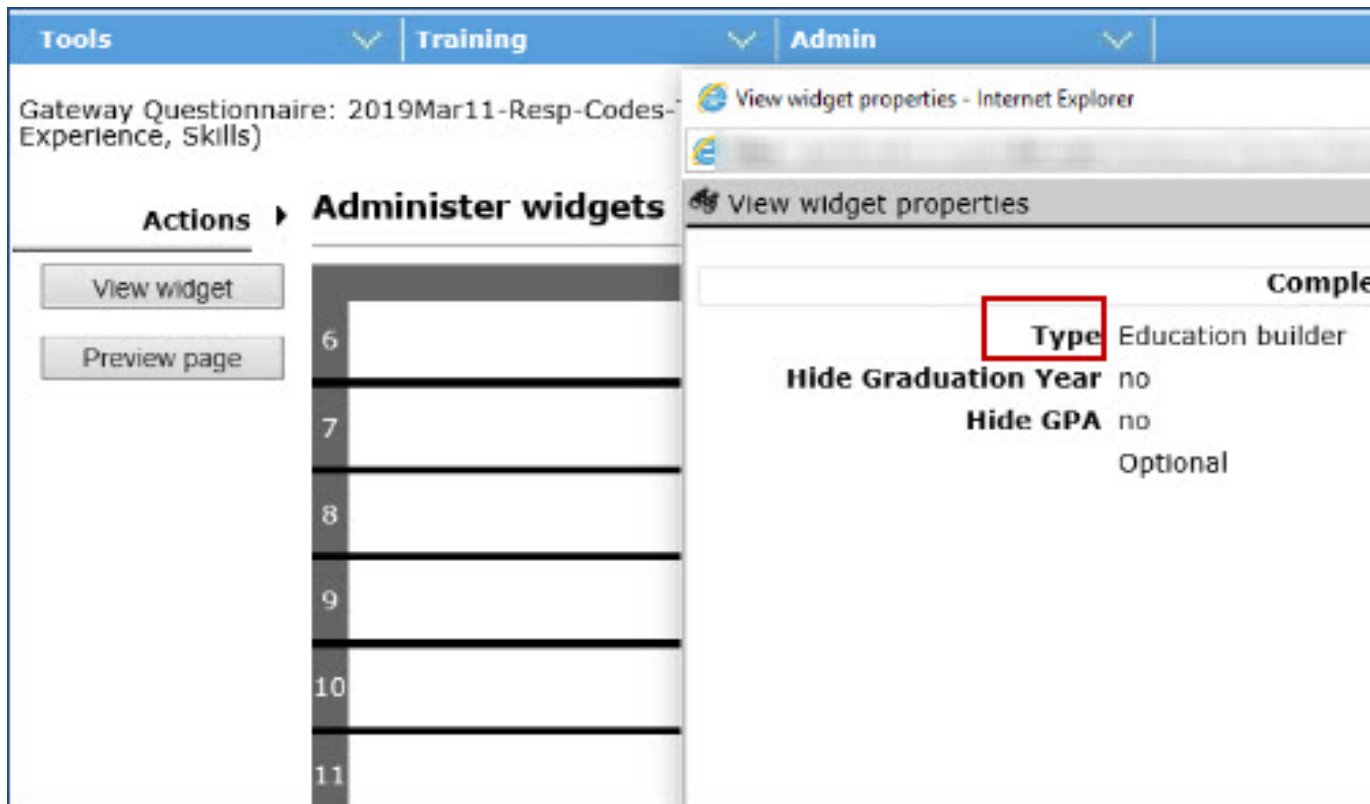

- A best practice while using the whitelist option is for the clients to use only a single domain for embedding each Responsive Talent Gateway and provide the same for the whitelist. In this way, a single domain will work for both x-frame-options and content-security-policy and therefore, both new and old browsers are covered.
- While using the Allow only these URLs, the text box validates the format of the URLs entered. An error message is displayed if invalid URL is entered.

RTC internal reference # 103327, 117552.

Gateway Questionnaire - Complex Widget Label

From the classic Gateway questionnaire, the label of one of the fields in complex widgets has remained unchanged. During this release, Resume Type is updated to **Type** in order to avoid confusion and improve accuracy.

Workbench path: **Tools > Gateway Questionnaires > View sections/pages > View widgets > [select a complex widget]**

RTC internal reference # 117704.
