## BrassRing May'22 Release

BrassRing new features for release 22.05.10 are listed here.

### **BrassRing Client Reminders**

The Client Reminders section reminds clients of recently distributed important notices and links to comprehensive documentation and training for the special features recently introduced.

### **Data Insight Tool - Scripts for Scheduled Reports**

As announced throughout the previous releases, the BrassRing Engineering team executed automatic scripts to add end dates to Scheduled reports in the EU Staging environment and US staging environment.

Clients are informed via communication prior to the script execution for EU production and US production environments.

The FTP Reports are excluded from this script.

### **Ideas - You Asked We Listened**

We are proud to inform you that this build introduces features that were developed in response to clients' Ideas (previously known as Requests for Enhancement (RFEs)). Infinite is pleased to deliver these features in response to your responses and comments.

#### **Ideas**

The following features were delivered in response to the Ideas posted on Aha!

- Req Approval Rerouting - New Settings
- Talent Gateways - Preferred Name as First Name
- Rules Automation Manager - Populate Field Values - Append

### **BrassRing Dark Launch Features**

Dark Launch features are those features that are released to the Staging environment only and are NOT released to the Production environment for a considerable amount of time.

This process gives an opportunity and enough time to test these features thoroughly before they are available in the production environment. Clients are requested to configure and test these features and provide their feedback and inputs to your respective Infinite representatives.

### **Integrations - Req Import - JCDD JCPD Nodes**

#### **NOTE**

This feature is deployed to the **Staging environment - Only** with the current release. This feature will NOT be released to Production on 17 May 2022. The production date is yet to be determined. See the upcoming release notes for status updates on this feature.

Starting this release new nodes are added for JCDD and JCPD in the Requisition import integrations.

```
<APPLYJCDD excludeSTDFields="" excludeCUSTFields="" applyPostingDe-  
faults="[yes/no/1/0]">[yes/no/1/0]</APPLYJCDD>
```

- **excludeSTDFields** - This attribute can hold comma-separated standard field XML tags (actually DataInField of JobReqQuestions) which would be excluded while applying JCDD. This node can be empty otherwise.
- **excludeCUSTFields** - This attribute can hold comma-separated DataInField of the custom questions which would be excluded while applying JCDD. This node can be empty otherwise.
- **applyPostingDefaults** - Possible values would be yes/no/1/0.
- **APPLYJCDD** - Possible values would be yes/no/1/0.

For example:

```
<TransactInfo transactType="response"> <TransactId>november26916am</Transac-  
tId> <TimeStamp>2017-04-25 08:00 AM</TimeStamp> <Status> <Code>206</Code>  
<ShortDescription>Partial Success</ShortDescription> <LongDescription>Error  
while applying PostingDefaults</LongDescription> </Status></TransactInfo>
```

RTC internal reference #306760.

## Job Code Default Data - Req Import - Workbench Changes

### NOTE

This feature is deployed to the **Staging environment - Only** with the current release. This feature will NOT be released to Production on 17 May 2022. The production date is yet to be determined. See the upcoming release notes for status updates on this feature.

**Partial success** is a new status that is introduced in this current release in the Staging environment. In order to retrieve the logs and client statuses for this new status, a new drop-down item is added in the Workbench in the **Retrieve client posts** section.

The screenshot shows the Workbench interface with the 'Retrieve client posts' section. The 'Search in' dropdown menu is open, showing options: 'Partial Success', 'Success', 'Message XML', and 'Sync XML'. The 'Partial Success' option is highlighted. The interface also includes fields for 'Get last 10 posts (enter numbers only)', 'for manifest', 'with status', 'containing text', and 'Message ID'. There are radio buttons for 'Exact match', 'Match all words', and 'Match any word'. A 'Get posts' button is at the bottom.

## Talent Gateways - User Experience Enhancements

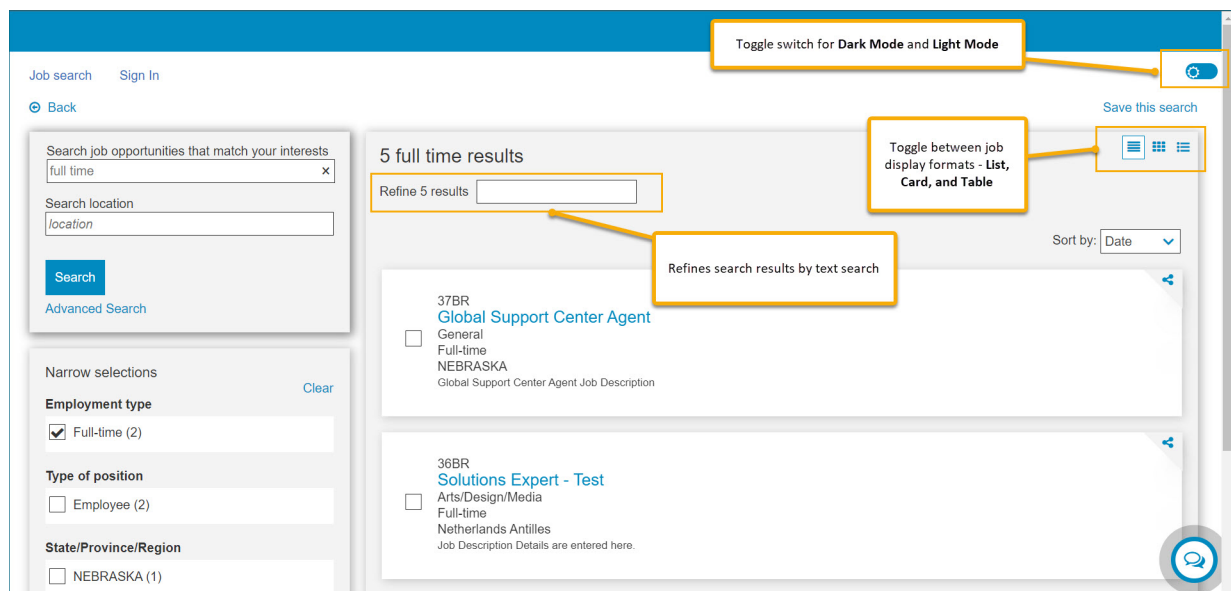

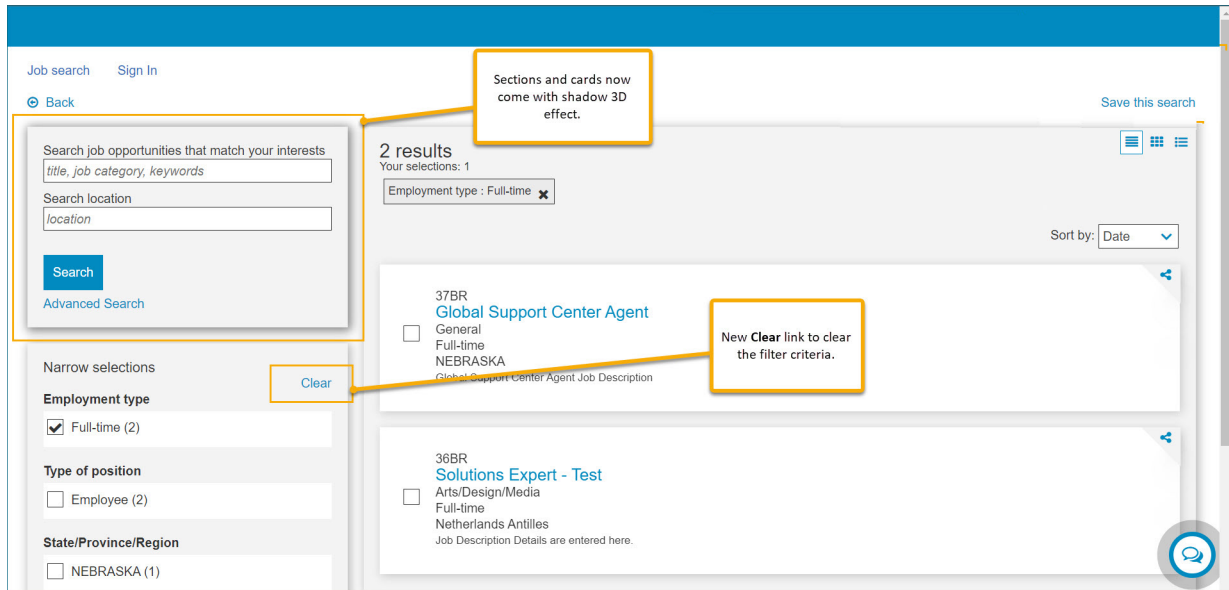

### NOTE

This feature is deployed to the **Staging environment - Only** with the current release. This feature will NOT be released to Production on 14 Jun 2022. The production date is yet to be determined. See the upcoming release notes for status updates on this feature.

The following user interface and experience enhancements are available on various pages of Talents Gateways for candidates starting this release.

- Toggle Job card display format. This toggle can be used to switch how jobs are displayed among the List view, Card view, and Table view.
- An additional filter to refine the search results is now available on the search results page. Candidates can add a simple text string to refine the search results further. This search is available only when there are over five results on the page.
- A toggle to switch between dark mode and light mode is now available. The Talent Gateway page can now be viewed either in light mode or dark mode based on the candidate's preference.
- Sections and Cards are displayed much more prominently starting this release. The sections and job cards now have a 3D shadow around the border.
- Cards display a subtle animation whenever the mouse pointer hovers over. The card has a zoom-in animation every time there is a mouse hover.
- A new link is added to clear the search filter selections on the filters panel. The link **Clear** is displayed only when at least one filter is selected. Selecting the link clears all filters.

## **BrassRing Visible Changes**

BrassRing visible changes for the current release are listed here.

### **Talent Gateways - Preferred Name as First Name**

The default setting for the Welcome page title (logged in) previously displayed the tokens for First name and last name. Starting this release, if the candidate's Talent Gateway profile contains a preferred name, then the preferred name is displayed instead of the First name.

Starting this release, on the Talent Gateway, the token checks if the Talent Gateway profile has a value present in the Preferred Name field.

- if available, it shows the Preferred name as [FIRSTNAME] + Last name.
- If unavailable, it shows the First name value as [FIRSTNAME]
- If the candidate has no saved profile (no name), a greeting is displayed without any name.

This new name pattern is displayed on six Talent Gateway pages:

- Dashboard > Jobs (#SavedJobs)
- Landing page (#home)
- Dashboard > Applications (#Applications)
- Dashboard > Searches & Job Alerts (#SavedSearches)
- Profile > Profile (#profile)
- Profile > My Files (#myFiles)

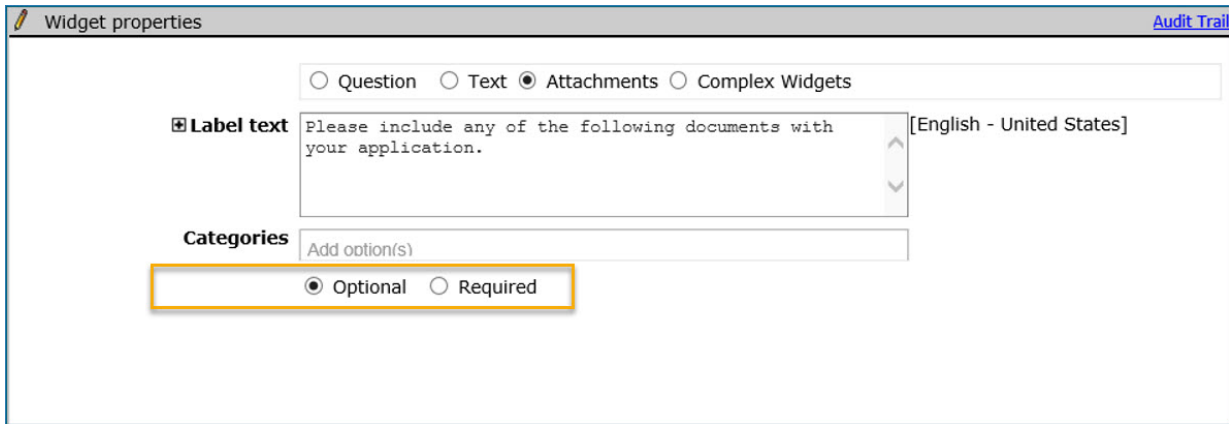

For example, on the Welcome page:

- If available, the display is "Welcome, [PreferredName] [LastName]!" such as "Welcome, Jon Doe!" (If the Talent Gateway First name = Jonathan, Preferred name = Jon, Last name = Doe)
- If unavailable, the display is as earlier, "Welcome, [FirstName] [LastName]!", such as "Welcome, Jonathan Doe!" (If the Talent Gateway First name = Jonathan, Preferred name [blank], Last name = Doe)
- If a candidate has no saved profile (no name), it shows as earlier, "Welcome, friend!" (if the Talent Gateway First name [blank], Preferred name [blank], Last name [blank])

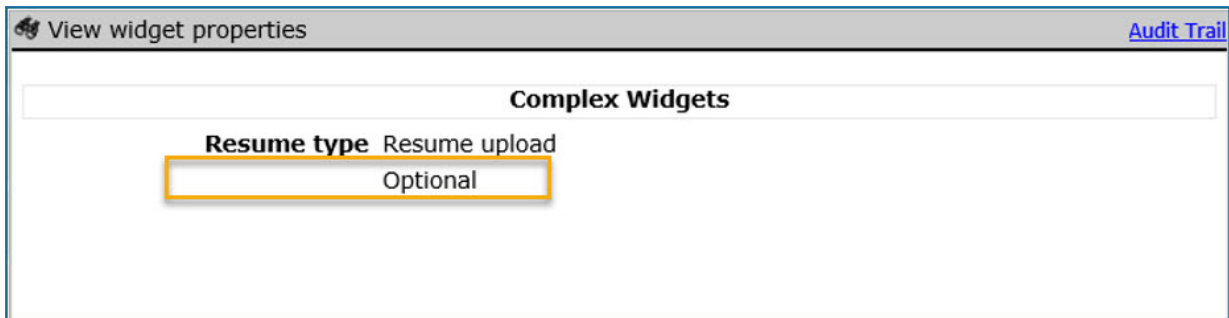

RTC internal reference # 306218.

## Gateway Questionnaires - Widget Attributes Update

It was observed that some Gateway Questionnaire Complex Widgets displayed the attributes Optional/Required without any attribute label. The complex widget screen shows the radio button attributes without any labels.

The screenshot shows a 'Widget properties' form. At the top, there are radio buttons for 'Question', 'Text', 'Attachments' (which is selected), and 'Complex Widgets'. Below this is a 'Label text' field containing the text 'Please include any of the following documents with your application.' and a language dropdown set to '[English - United States]'. Underneath is a 'Categories' field with 'Add option(s)' and a list of categories. The 'Optional' radio button is selected and highlighted with an orange box.

The screenshot shows a 'View widget properties' form. It displays a 'Complex Widgets' section with a 'Resume type' attribute. The attribute is labeled 'Resume upload' and has an 'Optional' radio button selected, which is highlighted with an orange box.

Appropriate labels are added for the attributes across the Gateway Questionnaire.

The following five attribute labels are added during this release:

- Resume upload - label: "Resume is "
- Cover letter upload - label: "Cover letter is "
- Education builder: "At least one education is "
- Experience builder: "At least one experience is "
- eSignature - label: "eSignature is "
- separate tab (Attachments) Attachments - label: "At least one attachment file is:"

RTC internal reference # 283177.

## 2 Factor Authenticator - Google Authenticator Updates

On the Talent Gateway Account Settings page, a new **Back to instructions** link is added to the Google Authenticator - Verify Pass-code modal starting this release.

The secret key instructions provided on the Account Settings page were observed to have grammar issues. The instructions are updated to the following during this release:

*Select "Enter provided key" then enter account name of your account in the "Enter account name" box. Next, enter the secret key from this window in the "Enter your key" box of the Authenticator app. Make sure you've chosen to make the key time-based, then select Add."*

RTC internal reference # 307184, 307475.

## **BrassRing Configurable Changes**

The BrassRing configurable changes for the current release are listed here.

### **Req Approval Rerouting - New Settings**

When the Workbench setting **Enforce approval reroute on req edits** is set to No, if edits are made to a req in BrassRing by the user, the approval rerouting is not enforced. Therefore, the approver can directly approve the changes. However, if the edits are made via an eLink, the req is rerouted in spite of being configured No

In order to improve user experience, the above workbench setting is updated and a new setting is added.

The existing setting "Enforce approval reroute on req edits" is updated to **Enforce approval reroute on req edits made directly BrassRing**. An additional setting **Enforce approval reroute on req edits made when accessing req via eLink** is added with Yes and No as options. The default value for this setting is Yes.

This setting enforces the reroute if set to YES, if the req is in a "Pending" status, and if the user edits the req after accessing it via an eLink. This setting DOES NOT enforce the reroute if set to NO, if the req is in a "Pending" status, and if the user edits the req after accessing it via an eLink.

RTC internal reference # 306598.

## **BrassRing Workbench Changes**

The Workbench changes for the current release are listed here.

### **Rules Automation Manager - Populate Field Values - Append**

The Rules Automation Manager (RAM) action of **Populate field values** overwrites existing fields if that field is a Standard Req Field - multi-select field type. When the RAM trigger is run based on a specific trigger activity, the field values are overwritten.

To avoid additional time and work, starting this release, a new feature is added. This new feature provides the ability to choose between append and overwrite functions for the Populate Field values.

RTC internal reference # 294916.

### **Rules Automation Manager - HR Actions**

Prevent trigger misconfiguration when **across [open] req context** is selected regarding HRStatus update.

Currently, if a trigger has content **across [open] req**, users can still update the HRstatus across req. This means if a candidate is filed to 50 reqs, 50 triggers start and each one tries updating the HRstatus across 50 reqs. This results in  $50 \times 50 = 2500$  HRstatus updates.

This is updated in the current release. The system prevents any updates to the HRStatus across req if the trigger context is already "across [open] req"

RAM Add/Edit Rule

Candidate Form Insert or Update: RAM\_SinglePC      Rule Name: rule1

Conditions | Actions

**Action**

Update HR Status ▾

Only update in other reqs (all active req templates)    Only update in other reqs (this req template)

Selected (0)   List >>

Update across all active reqs in all req templates    Update across all active reqs in this req template

Save Action   Cancel/Clear

**Existing Actions**

RTC internal reference # 307520.

### Rules Automation Manager - Delayed Triggering

Starting this release, to promote the usage of Delayed Triggering and Aging, Workbench users are prevented from creating a trigger with delayed processing greater than one hour.

If the delay is not between zero and one, the following message is displayed:

Delay processing: Trigger Timing must be between 0 and 1 hour or Decimals with single-digit precision are only allowed for a timing value between 0 and 1. For delay > 1, please use Delayed Triggering or Aging.

Starting this release the Delayed Processing triggers that have a timing value of more than one hour are transferred to Delayed Triggering by using a script.

RTC internal reference # 307612.

## Lead Manager May'22 Release

There are no new features released during this release for Lead Manager.

## Onboard May'22 Release

Onboard new features for the May release are listed here.

### **Onboard Visible Changes**

Onboard new features for the current release are listed here.

#### **MNH Page - Remove Social Security Number Field**

Starting this release, the social security number field is removed from the filter search.

SSN field value is displayed as an encrypted value. Therefore, this field is removed from the filter search.

RTC internal reference # 306496.

### **Onboard Configuration Changes**

There are no Onboard configurable features for the current release.

### **Onboard Fixed Defects**

The following defects are fixed during the current release.

**Table 1. Onboard Fixed Defects**

RTC Defect Number	Defect Description
306650	00080358 - MNH - Revalidation Public Report Issue on Receipts
