# BrassRing Updates - October 2022

BrassRing updates for September/October 2022 are listed here.

## BrassRing Workbench Changes

The Workbench changes for the current release are listed here.

### Rules Automation Manager - New Trigger Mechanism

The Trigger HRStatusReqOption runs on Hiring HRStatus. In some scenarios where clients have a high number of positions for the same req, the number of candidates for that req runs into thousands. Each time a candidate's status changes to hired in this req, the trigger runs for all candidates for each position.

In a hypothetical scenario where a client opens a req for filling 50 positions and there are about 5000 candidates that have applied for such a position, each time a candidate's status is updated to Hired, 5000 triggers are run for each position. Therefore, for the same req, 50x5000 = 250000 triggers are fired.

Starting this month, a new trigger mechanism called Last Hired is introduced. This trigger gets fired when all the positions are filled and the positions remaining are zero.

RTC internal reference # 308235.

### Rules Automation Manager - Data Export Action

Previously the Data Export option was available only for HR Status change-based triggers. Starting this release, this action is available in the following triggers:

- HR status
- Req  TM with Candidate context
- Candidate TM with Req Context
- Doc sub
- Req sub

RTC internal reference # 309781.
