

# Operator

## Current Constraints

- **Onboards slowly** and struggles to hit production goals due to tribal knowledge silos, turnover, labor shortage
- Lacks **visibility into upstream/downstream** processes
- Receives and gives **insufficient information at shift changeovers**

## Future through MDP

- Making better decisions with **access to relevant data**, boosted by alerting/optimization tools.
- Gives and receives data at shift changeovers that are **precise and lean** rather than anecdotal
- **Communicating efficiently with other operators on the line** with production data language driven by MDP standardization
